

## **Integrated Vegetation Management Program: Yard Lights and Lines**

The installation of yard lights and lines as part of Union Power Cooperative's Integrated Vegetation Management (IVM) Program is available upon the request and at the expense of the Member. To obtain more information about this service, please contact Union Power Cooperative at 704-289-3145.

Union Power Cooperative's IVM Department will conduct a one-time courtesy pruning, as needed, for installation of the equipment. Once the unit is installed, other than replacement of the bulb and equipment, Union Power Cooperative's IVM Department will not perform any tree pruning services.

We **will** address the following situations, per assessment by our personnel, at no cost to the Member:

- Hard contact from a dead or green branch causing line displacement

Situations we **will not** address include:

- When there's no access to the tree for mechanized equipment or if the tree is unsafe for climbing
- Branches or leaves that are "tickling" the line
- Dead trees near the line or equipment
- Pruning for full and proper light dissemination

If you and/or your tree pruning vendor have any concerns or are uncomfortable working near the lines please contact us at 704 289-3145 and ask for a wire drop (48-hour notice required). We will disconnect the wire for your safety at no charge. Call us back when ready for us to re-attach the wire.
